Summary

The Global Adult Tobacco Survey (GATS), a component of Global Tobacco Surveillance System (GTSS), is a global standard for systematically monitoring adult tobacco use and tracking key tobacco control indicators. GATS is a nationally representative household survey of adults 15 years of age or older using a standard core questionnaire, sample design, and data collection and management procedures that were reviewed and approved by international experts. GATS is intended to enhance the capacity of countries to design, implement and evaluate tobacco control interventions.

GATS is designed to produce national and sub-national estimates among adults across countries. The target population includes all non-institutionalized men and women 15 years of age or older who consider the country to be their usual place of residence. All members of the target population are sampled from the household that is their usual place of residence. All GATS countries use country-specific stratified multi-stage cluster sampling designs and an interview consisting of a household screening component and an individual component administered to the selected respondent. Data is collected using electronic handheld devices.

The 2009 Egypt GATS was conducted in 2009 using a three-stage stratified cluster sample design. Egypt GATS was based on the Central Agency for Public Mobilization and Statistics (CAPMAS) master sample of the 2006 census, and was designed to produce representative samples for the five regions of Egypt – the Cosmopolitan governorate (Cairo, Alexandria, Suez, and Port Said), Urban Lower Egypt, Rural Lower Egypt, Urban Upper Egypt, and Rural Upper Egypt. A total of 23,760 households were selected; 22,685 households were screened; 21,389 individuals aged 15 years and older were identified; and 20,924 interviews were completed. Twenty-two cases were excluded because their interviews were incomplete under criteria established in the GATS Standard Protocol. The Egypt GATS questionnaire includes core questions about background characteristics regarding prevalence of tobacco smoking and prevalence of smokeless tobacco use. Core questions covered topics on cessation, secondhand smoke, economics, media, and knowledge, attitudes and perceptions towards tobacco. Questions were adapted in each section, then reviewed and approved by the GATS questionnaire expert review committee. The questionnaire was administered electronically in the Arabic language using handheld devices (PDAs).

The data file does not contain personal identifying information to ensure and protect confidentiality. Due to the complex sample design, clustering, stratification and sample weights should be taken into account in the data analysis in order to obtain proper point estimates and variances. The stratification, cluster and sample weight variables are `gatsstrata`, `gatscluster` and `gatsweight`, respectively.
