# 1. Introduction

---

Tobacco use is a major preventable cause of premature death and disease worldwide, with approximately 1.4 billion people age 15 years or older using tobacco<sup>1</sup>. Furthermore, more than 8 million people die each year due to tobacco-related illnesses<sup>2</sup>. If current trends continue, tobacco use may kill a billion people by the end of this century, and it is estimated that more than three quarters of these deaths will be in low- and middle-income countries<sup>3</sup>. An efficient and systematic surveillance mechanism is essential to monitor and manage the epidemic.

The **Global Adult Tobacco Survey (GATS)**, a component of Global Tobacco Surveillance System (GTSS), is a global standard for systematically monitoring adult tobacco use and tracking key tobacco control indicators. GATS is a nationally representative household survey of adults 15 years of age or older using a standard core questionnaire, sample design, and data collection and management procedures that were reviewed and approved by international experts. GATS is intended to enhance the capacity of countries to design, implement and evaluate tobacco control interventions.

In order to maximize the efficiency of the data collected from GATS, a series of manuals has been created. These manuals are designed to provide countries with standard requirements as well as several recommendations on the design and implementation of the survey in every step of the GATS process. They are also designed to offer guidance on how a particular country might adjust features of the GATS protocol in order to maximize the utility of the data within the country. In order to maintain consistency and comparability across countries, following the standard protocol is strongly encouraged.

---

**GATS manuals provide systematic guidance on the design and implementation of the survey.**

---

## 1.1 Overview of the Global Adult Tobacco Survey

GATS is designed to produce national and sub-national estimates among adults across countries. The target population includes all non-institutionalized men and women 15 years of age or older who consider the country to be their usual place of residence. All members of the target population will be sampled from the household that is their usual place of residence.

GATS uses a geographically clustered multistage sampling methodology to identify the specific households that Field Interviewers will contact. First, a country is divided into Primary Sampling Units, segments within these Primary Sampling Units, and households within the segments. Then, a random sample of households is selected to participate in GATS.

---

**The GATS interview is composed of two parts: *Household Questionnaire* and *Individual Questionnaire*. These questionnaires are administered using an electronic data collection device.**

<sup>3</sup> Mathers, C.D., and Loncar, D. Projections of Global Mortality and Burden of Disease from 2002 to 2030. *PLoS Medicine*, 2006, 3(11):e442.

The GATS interview consists of two parts: the *Household Questionnaire* and the *Individual Questionnaire*. The *Household Questionnaire* (household screening) and the *Individual Questionnaire* (individual interview) will be conducted using an electronic data collection device.

At each address in the sample, Field Interviewers will administer the *Household Questionnaire* to one adult who resides in the household. The purposes of the *Household Questionnaire* are to determine if the selected household meets GATS eligibility requirements and to make a list, or roster, of all eligible members of the household. Once a roster of eligible residents of the household is completed, one individual will be randomly selected to complete the *Individual Questionnaire*. The *Individual Questionnaire* asks questions about background characteristics; tobacco smoking; electronic cigarettes; smokeless tobacco; cessation; secondhand smoke; economics; media; and knowledge, attitudes, and perceptions about tobacco.

## 1.2 Use of this Manual

This manual provides programming specifications for the core GATS *Household* and *Individual Questionnaires* using handheld computer administration. This chapter provides background information on the GATS. *Chapters 2* and *3* provide specific details for the core household and individual survey questions including question (variable) number, question text, answer categories and values, range information, routing/skip logic, and help screens (QxQ instructions). *Chapter 4* lists the standard Visit Record event codes that are provided in the GATS GSS Case Management System. Note that these core questionnaire programming specifications will be modified for each GATS country to match their country-adapted questionnaire.

## 1.3 Programming Specifications Details

The specifications are color coded in the *Household Questionnaire (Chapter 2)* and *Individual Questionnaire (Chapter 3)* for question names, attributes, and the next question for each question.

In the first column, all question names are in **BLUE**.

In the second column:

- **BLACK** text is the same text displayed on the Android screen. It may contain HTML tags that tell the system to create a carriage return (<P> or <BR>) or to update the formatting of the text displayed on the screen; for example, <U> and </U> to underline text.
- **BLUE** text indicates a number response requirement or QxQ instructions:
  - For NUM type questions, the user is required to respond with a number. [Range: represents the expected continuous range that can be entered.
  - **BLUE** text provides QxQ instructions with additional information that the user can access. QxQ instructions are not available for every question.
- **RED** text indicates question type and programming instructions:
  - Question type appears only in the top-right corner of the cell; for example, **NUM**, **TEXT**, **LIST**, **COMP**, or **INFO**.

- Programming instructions, which are processed as the user leaves a question, include **IF** statements, **SET** statements, or other instructions.
- **GREEN** text provides special instructions, such as to allow integers, define values that can be outside of the set numeric range, or instructions on what cannot be entered into TEXT questions.

In the third column:

- **BLUE** text indicates the next question presented to the user unless the programming instructions include a conditional GOTO statement.

## 2. Household Questionnaire

The *Household Questionnaire* is used to determine if the selected household meets GATS eligibility requirements and to make a list, or roster, of all eligible members of the household. Once a roster of eligible residents of the household is completed, one individual will be randomly selected to complete the *Individual Questionnaire*.

## 4. Visit Record

---

The Visit Record displays the visits that have been made for an individual case and documents each contact with the housing unit. A code is automatically assigned to the Visit Record when a *Household Questionnaire* or *Individual Questionnaire* has been completed. Visit Record codes and descriptions are listed for the *Household Questionnaire* and *Individual Questionnaire*.

### Household Questionnaire Visit Record Codes and Descriptions

Visit Record Code	Visit Record Description
0	New Case Unworked
102	Break-off: Household Questionnaire Not Complete
103	Household Screening Respondent not available
104	Household Refusal
105	Unoccupied/Vacant
106	Selected Address not Household
108	Other Household Nonresponse
109	Nobody Home
200	Final Complete Household -- 1 Selected
201	Final Complete Household -- 0 Selected
202	Final Break-off: Household Questionnaire not complete
203	Final Household Screening Respondent not available
204	Final Household Refusal
205	Final Unoccupied/Vacant
206	Final Selected Address not Household
208	Final Other Household Nonresponse
209	Final Nobody Home
887	Household Questionnaire Reopened
999	Household Replaced

## Individual Questionnaire Visit Record Codes and Descriptions

Visit Record Code	Visit Record Description
0	New Case Unworked
302	Break-off: Individual Questionnaire not complete
303	Individual Questionnaire Respondent Ineligible
304	Individual Questionnaire Respondent Refusal
307	Individual Questionnaire Respondent Incapacitated
308	Other Individual Questionnaire Nonresponse
309	Individual Questionnaire Respondent not at home
400	Final Completed Individual Questionnaire
402	Final Break-off: Individual Questionnaire not complete
403	Final Individual Questionnaire Respondent Ineligible
404	Final Individual Questionnaire Respondent Refusal
407	Final Individual Questionnaire Respondent Incapacitated
408	Final Other Individual Questionnaire Nonresponse
409	Final Individual Questionnaire Respondent not at home
887	Individual Questionnaire Reopened

The following automatic rules are observed for visit records:

- The *Household Questionnaire* Visit Record is automatically set as 200 when the *Household Questionnaire* is completed and a respondent is selected to complete the *Individual Questionnaire*.
- The *Household Questionnaire* Visit Record is automatically set as 201 when the *Household Questionnaire* is completed and no respondent is selected to complete the *Individual Questionnaire* (no one is eligible for the *Individual Questionnaire*).
- The *Individual Questionnaire* Visit Record cannot be accessed by the interviewer until the *Household Questionnaire* code is set as 200.
- The *Individual Questionnaire* Visit Record is automatically set as 400 when the *Individual Questionnaire* is fully completed.
- The *Individual Questionnaire* Visit Record is automatically set as 403 when answers in the *Individual Questionnaire* determine that the selected respondent is not eligible to complete the *Individual Questionnaire*.
