

Bolivia - Cochabamba (Ages 13-15)

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Bolivia - Cochabamba GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, exposure to secondhand smoke (SHS), cessation, media and advertising, and school curriculum. These determinants are components Bolivia - Cochabamba could include in a comprehensive tobacco control program.

The Bolivia - Cochabamba GYTS was a school-based survey of students in 1st, 2nd, 3rd, and 4th secondary, and 8th primary conducted in 2000.

A two-stage cluster sample design was used to produce representative data for Bolivia - Cochabamba. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 91.1%, the class response rate was 100.0%, the student response rate was 86.8%, and the overall response rate was 79.1%. A total of 4,152 students aged 13-15 participated in the Bolivia - Cochabamba GYTS.

Prevalence

- 50.3% of students had ever smoked cigarettes (Boy = 57.3%, Girl = 43.9%)
- 24.6% currently use any tobacco product (Boy = 29.7%, Girl = 19.8%)
- 20.8% currently smoke cigarettes (Boy = 26.0%, Girl = 16.1%)
- 9.0% currently use other tobacco products (Boy = 10.2%, Girl = 7.9%)
- 26.1% of never smokers are likely to initiate smoking next year
