Vietnam (Ages 13-15)	global
Global Youth Tobacco Survey (GYTS)	youth tobacco
FACT SHEET · · · · · · · · · · ·	survey

The Vietnam GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, exposure to secondhand smoke (SHS), cessation, media and advertising, and school curriculum. These determinants are components Vietnam could include in a comprehensive tobacco control program.

The Vietnam GYTS was a school-based survey of students in grades 8-11 conducted in 2007.

A two-stage cluster sample design was used to produce representative data for Vietnam. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 95.0%, the class response rate was 100%, the student response rate was 96.9%, and the overall response rate was 92.1%. A total of 14,637 students aged 13-15 participated in the Vietnam-GYTS.

### Prevalence

11.0% of students had ever smoked cigarettes (Boy = 17.6%, Girl = 5.5%)

3.8% currently use any tobacco product (Boy = 6.5%, Girl = 1.5%)

3.3% currently smoke cigarettes (Boy = 5.9%, Girl = 1.2%)
